

C3 Generative AI: AWS Marketplace Edition

Unified Knowledge Source for Accelerated Time to Insight

C3 Generative AI: AWS Marketplace Edition enables enterprise users to rapidly locate, retrieve, and act on insights in enterprise data and is available in AWS Marketplace with a 14-day free trial.

Rapid Access

to relevant, critical, and high-value insights previously siloed across disparate systems

Fast Configuration

through guided, self-service onboarding and configuration workflows

Enterprise Grade

data security and access controls that meet strict enterprise requirements

Future Proof

investments with an LLM-agnostic architecture and pre-built connectors to enterprise systems

Today, enterprise data and expertise are often spread out and siloed in disparate datastores, documents, and with individuals. As a result, enterprise users spend up to 20% of their time searching for critical information, yet over two-thirds of enterprise data is still never utilized.

C3 Generative AI: AWS Marketplace Edition enables enterprise users to rapidly access and act on insights stored in enterprise data, including from text files (.txt, .rtf), Word documents (.doc, .docx), PDF files (.pdf), PowerPoint presentations (.pptx), web pages (.html), and Markdown (.md). Users can upload documents, tune search performance, add new users, and start using C3 Generative AI: AWS Marketplace Edition in just a few clicks.

C3 Generative AI: AWS Marketplace Edition is an enterprise-ready solution with consistent, hallucination-free responses, traceability to source documents, and full enterprise access controls.

Feature Summary

- **In-app onboarding demo and self-service configuration workflows** help users get started in just a few steps
- **Natural language search interface** provides rapid access to information across documents in enterprise and external information systems
- **Deterministic responses** via a retrieval-augmented architecture that separates the enterprise knowledge base from the LLM
- **Traceable to ground truth** for every insight based on the corpus of enterprise data
- **No LLM-caused data leakage** with access controls applied to user queries and separation of LLM from enterprise data
- **Hallucination-free responses** with embedded relevance scoring and a solution that answers “I don’t know” when relevance threshold is not met
- **Available in AWS Marketplace** with a 14-day free trial

The screenshot displays the C3 Generative AI interface. At the top, a search bar contains the query "What are population growth trends in the United States?". Below the search bar, an "AI Summary" section shows a generated response: "The population of the United States is 337 million people (2022), ranking 3rd compared to the rest of the world. The annual population growth rate is 0.69% (2022), ranking 130th compared to the rest of the world. Overall population growth is declining, down from 1.15% annual growth in 2000, and 1.56% annual growth in 1950. Similar trends are observed in other developed countries, including Japan, the United Kingdom, and France." Below the summary, a "Sources" section lists two items: "1. United States Country Summary" and "2. Country Comparisons - Population Growth Rate". A "6 Results" section follows, displaying a table of search results with columns for "Result" and "Tags". The results include documents like "UnitedStatesCountrySummary.pdf", "CountryComparisonPopulationGrowthRate.pdf", "UnitedStatesUrbanGrowthRate.pdf", "CountryComparisonBirthRate.pdf", and "CountryComparisonDeathRate.pdf". On the right side, an "AI summary of top result" chat window is open, showing a message from "C3 AI" at 6:45 PM: "What can I help you with? Feel free to ask a follow-up question." Below the chat window is a text input field and a send button.
