

Welcome to C3 AI Federal Forum

Thank you for joining us in National Harbor today for C3 AI Federal Forum 2025. This one-day event is about engaging with government leaders and ensuring we deliver trusted Enterprise AI and agentic AI solutions — grounded in transparency, trust, and mission-driven impact — that achieve real outcomes.

As many of you know, I recently stepped into the role of Chief Executive Officer at C3 AI. It's an honor to be here with you today — one of my first opportunities to engage directly with the federal community on AI from the industry side. I am excited to continue building on C3 AI's legacy of innovation, and to deepen our partnerships with those who are advancing the nation's most critical missions.

In a swiftly evolving global landscape, the imperative for AI that delivers clarity and precision across federal operations has never been greater.

At this Forum, our agenda is meticulously crafted around how Enterprise AI is reshaping government functions — from streamlining fleet readiness to reinforcing infrastructure resilience — through production-grade, mission-proven AI applications. We're grateful to all the speakers joining us from across government and industry who are here to share their experience and expertise on not just the ways we should use AI, but how we should procure it and deploy it securely and safely.

And thank you also to our sponsors and partners — Microsoft, AWS, HII, Cathexis, SMX, Metrostar, and Carahsoft — whose support is instrumental in advancing AI-driven transformation across the U.S. government.

We look forward to substantive and engaging conversations today and beyond.

Warm regards,

Stephen Ehikian
CEO
C3 AI
